

2nd edition of “TOP AI Driven Companies” report with participation of MCI

25.11.2024

“TOP AI Driven Companies. The best companies shaping the technological landscape” – this is the title of the 2nd edition of the report prepared jointly by MCI Capital, Bain & Company and ART OF NETWORKING. It was presented during the Warsaw conference Poland.Europe.World.

“Based on observations and experience from previous technological revolutions, it is safe to say that AI is becoming a major area of investment in the US, but also worldwide, including Poland. In the past year, about one third of global venture capital investments were focused on artificial intelligence,” – wrote Tomasz Czechowicz in a foreword to the report.

“The AI revolution is a huge development opportunity for Poland and the entire CEE region, in which we should take an active part. MCI Capital wishes all winners further dynamic growth and at the same time we believe that as the largest technology fund in the region we will play an important role in supporting selected AI companies on their path to success,” – added Czechowicz.

“AI companies in Poland are primarily software houses and product companies developing applications in the areas of marketing, text and image recognition. Compared to last year’s results, it is very pleasing that the percentage of people working on real products and applications with their own IP has significantly increased,” – said Tomasz Mrozowski, investment partner at MCI during the presentation of the report.
